Who Benefits More? Category - Key Principles

Axiom & Principles

Axiom: People with less physical and mental strength and stamina available to travel by surface benefit more from aviation than those with more physical and mental strength and stamina.

Principle: To transport people with less physical and mental strength and stamina, use aviation.

Axiom: Surface travel and aviation are not respecters of persons. There is little-to-no correlation (relationship) between who someone is and 1) surface transport efficiency, or 2) work advancement by aviation.

Principle: Do not base the use of aviation strictly on someone's seniority, their level in the organization, region of origin, age, gender, or whether they are a national or an expatriate.
